

Edu IT would like to introduce Tom Barrett

Tom leads education and creative projects for the Australian team of NoTosh and is based in Melbourne.

Taken straight from his bio on the NoTosh website: Tom Barrett was one of the UK's best known primary classroom teachers before starting with NoTosh in 2011, and is now known for his highly innovative approaches with schools around the world. He curates and shares thousands of practical ideas from teachers across the globe on his blog edte.ch, and puts into practice the very best thinking on educational technology to inspire and engage children in their learning.

Tom works on leadership, technology adoption and improving teacher capacity with NoTosh in schools across Australia, and provides regular input on other projects globally. He inspires teacher audiences with fresh ideas for engaging young people in learning at conferences and workshops.

The great news is we've been able to secure Tom for the Edu IT Conference and he'll be delivering two workshops over the two days.

Design Thinking for Enquiry.

We've all heard about how important creativity is in the curriculum, but creativity is more than some digital media, music and finger painting. What exactly are the creative structures used by people working in creative industries (such as TV, media, fashion and tech startups), how can they be harnessed in planning and undertaking fresh approaches to learning, and how do these practices stand up to robust education research?

In this workshop we will explore the Design Thinking enquiry process by working through it ourselves and explore how this can form a rigorous and yet creative approach to enquiry in the classroom

For school leadership;

Design Thinking for School Change

As a process for enquiry, Design Thinking provides a rigorous and yet creative process - and is equally relevant to our work in dealing with complex school change. In this workshop we will explore how we can use the thinking process many creative industry companies regularly use to explore on-going change and development.

We will explore a broad school based challenge that offers everyone the chance to contribute, we will work through an efficient process of understanding the breadth of the challenge, creating fresh ideas and prototypes and how we might test those new ideas with colleagues.

**Come and join us on this wonderful journey!
